Customer Documentation Overview

Visual day-2 control plane for KubeVirt and Kubernetes

2026-10-21

Zeus OS is the visual day-2 control plane for **KubeVirt** virtual machines and Kubernetes infrastructure. This package is written for operators, platform admins, and FinOps users — not application developers hacking on the source tree.

You want to…	Open
Install and log in	Getting Started
Learn the shell (nav, search, workspaces)	Using the Dashboard
Follow a page, step by step	Page-by-page guides
Multi-page jobs (create, migrate, contain…)	Common workflows
Look up any screen by route	Complete page index
Deploy, auth, TLS, ports	Admin basics
Browse capabilities by theme	Feature Guide
Fix a symptom	Troubleshooting · FAQ

Printable PDFs

Build branded PDFs from this Markdown (requires Chrome/Chromium + `ui` deps):

```
node scripts/customer-docs/build-customer-pdfs.mjs
```

Output lands in `pdf/`:

PDF	Contents
`Zeus-OS-Customer-README.pdf`	This overview
`Zeus-OS-Getting-Started.pdf`	Access, login, dashboard basics, common workflows
`Zeus-OS-Page-by-Page.pdf`	Complete manual — every dashboard page (~190 pages)
`Zeus-OS-Admin-Basics.pdf`	Deploy, auth, TLS, ports

The build regenerates both indexes first and validates that every guide exists. Check links independently with `node scripts/customer-docs/check-links.mjs`.

Also available: the feature-domain **Customer Feature Guide PDF** (`node scripts/build-feature-guide.mjs`).

Product at a glance

```
Web dashboard  →  see inventory, operate VMs, consoles, cost, security
TUI (zeus-os)  →  k9s-style terminal for the same cluster
CLI            →  script power / snapshot / guest actions
REST + WS API  →  /api/v1 (OpenAPI in Developer Center)
```

Zeus OS operates what is already running on Kubernetes + KubeVirt. VMware import / conversion lives in sibling products (**Transiva**, **h2kvm**); Zeus links out to those engines from Migrations / Migration Factory.

How this manual is organized

1. **Getting started** — URL, login, first five workflows.
2. **Using the dashboard** — sidebar, command palette, browse vs workbench.
3. **Page-by-page** — a guide for **every** dashboard screen (purpose, when to use it, steps, related pages). All 132 sidebar routes plus workbench pages, wizards, product centers, and Settings categories are covered.
4. **Page index** — every route with a one-line purpose and a link to its guide.
5. **Admin basics** — what platform admins configure before operators use the UI.

Deep engineering docs live under `../dev/` and are out of scope for customers.

Support surfaces (quick map)

Need	Typical path
VM inventory & power	`/vms` → workbench `/vms/:namespace/:name`
Create a VM	`/vm-setup` or `/vms/new`
Live console (VNC/serial)	VM workbench → Console · `/consolehub`
Storage / PVCs	`/storage`
Network containment	`/packetwolf`
Backup / restore	`/velero`, `/backup-wizard`, `/restore-wizard`
Cost	`/cost-intelligence`, `/rightsizing`
Incidents	`/incidents`
Attention	`/attention`
Settings	`/settings`
